

BACKEND ENGINEERING

Belal Raed

Laravel Backend Developer · Co-founder of ROOT

Backend developer with hands-on Laravel experience since 2022, and co-founder of ROOT, a Palestinian startup shipping Arabic-first SaaS products used by real businesses. I build reliable systems, REST APIs, asynchronous workflows, and real-time integrations, and carry products from analysis to production.

Git · GitHub · Docker

Supporting Frontend
Vue.js · TypeScript · Inertia.js · Tailwind CSS

LANGUAGES

Arabic	Native
English	Professional

EXPERIENCE

Co-founder & Full-stack Developer
2026 — Present

ROOT · rootps.com

- Co-founded a business systems startup building Arabic-native, RTL software for companies across the Middle East and North Africa, with three products live in production.
- **ChatCore:** AI agent that takes orders inside WhatsApp, Instagram, and Messenger, collects missing details, confirms prices, and files orders to a unified dashboard.
- **DentalCore & MadrasaCore:** Multi-branch dental practice management with real-time analytics, and a school management system with role-based permissions and Excel/PDF reporting.

Laravel Backend Developer
2025 — Present

MuscatApps

- Independently architect and deliver Laravel systems with REST APIs, queues, events, notifications, real-time features, and third-party integrations.
- **Shams:** Built and launched a production multi-branch platform for a butcher shop, two restaurants, and a meat store in Oman. The system uses Laravel, MySQL, Node.js, and the official Meta WhatsApp API to receive customer orders, route branch workflows, and provide central administration.
- **Government Services Platform:** Built a launch-ready Laravel platform for multilingual citizen requests via WhatsApp, employee case assignment, staff-application APIs, and real-time OpenAI-powered translation between participants.
- Maintain and extend systems across e-commerce, booking, education, finance, employee management, and institutional services.

Freelance Laravel Developer
2024 — Present

Independent

- Deliver backend applications from requirements and database design through APIs, integrations, deployment, maintenance, and post-launch support.
- Improve existing products through debugging, new backend features, workflow refinement, and clear client communication.

EDUCATION

Bachelor's Degree in Web Computing
Islamic University of Gaza (IUG)
Overall Grade: Very Good

Expected 2026
